

C2H4 Gas Sensor in Miniature Housing

## **Applications**

- · Discontinuous Measurement
- Fruit Ripening
- For Portable Gas Detectors

### <u>Measurement</u>

| Operation Principle                        | 3-Electrode Electrochemical |  |
|--|-----------------------------|--|
| Nominal Range                              | 0 - 200 ppm                 |  |
| Maximum Overload                           | 500 ppm                     |  |
| Inboard Filter                             | -                           |  |
| Output Signal                              | 75 ± 25 nA/ppm              |  |
| Resolution (Electronics dependent)         | < 1 ppm                     |  |
| T80 Response Time                          | < 60 s                      |  |
| Typical Baseline Range (pure air, 20°C)    | -1.0 ppm to 5.0 ppm         |  |
| Maximum Zero Shift (+20°C to +40°C)        | see Graph                   |  |
| Repeatability                              | < 2 % of signal             |  |
| Output Linearity                           | Linear                      |  |
| Gain (Only applies to 4-Electrode sensors) | -                           |  |

## Performance data recorded at 20 - 25 °C, 30 - 50% RH, 900 - 1100 mbar

## **Electrical**

| Rec. Load Resistor           | 10 - 33 Ω       |
|------------------------------|-----------------|
| Bias (V_Sens-V_Ref)          | not recommended |
| Conformity to RoHS directive | RoHS Compliance |

## **Environmental**

| Relative Humidity Range | 15 % to 90 % RH non-condensing |
|-------------------------|--------------------------------|
| Temperature Range       | -40 °C to 50 °C                |
| Pressure Range          | Atmospheric                    |
| Pressure Coefficient    | N.D.                           |
| Humidity Effect         | None                           |

## Lifetime

| Expected Operation Life                | 2 years in air                  |
|--|---------------------------------|
| Expected Long Term Output Drift in air | < 5 % signal loss per month     |
| Filter Life                            | not applicable                  |
| Storage Life                           | 6 months in container           |
| Rec. Storage Temperature               | 5°C - 20°C                      |
| Warranty Period                        | 12 months from date of dispatch |

### Performance data recorded at 20 – 25 °C, 30 - 50% RH, 900 - 1100 mbar

## **Cross Sensitivity Data**

The table below does not claim to be complete. We recommend using the target gas for calibration purposes. Using surrogate (interfering) gases can result in inaccuracies in the final calibration. Please contact Membrapor AG for further support regarding cross sensitivities.

| Interfering Gas | Concentration [ppm] | Reading [ppm] |
|-----------------|---------------------|---------------|
| CO              | 100                 | < 60          |

### Performance data recorded at 20 - 25 °C, 30 - 50% RH, 900 - 1100 mbar

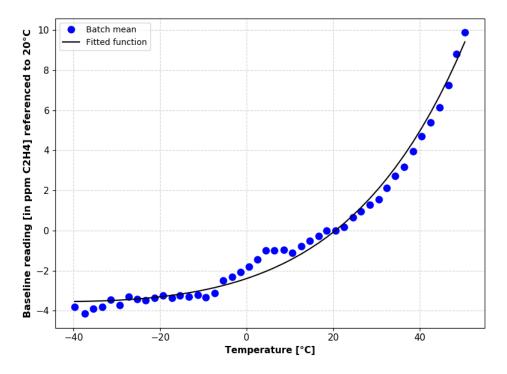

## Temperature dependence

The output of an electrochemical sensor varies with temperature. The graphs below show the temperature-dependent variation of baseline and sensitivity, respectively. The results shown here are raw data (batch average) without any post-processing steps. The sensitivity and baseline are referenced to the signal at 20°C (reference point).

Please note: It is highly recommended to acquire the temperature dependence curves with the whole instrument. The sampling system, the humidity, the electronics and the interaction between the electronics and the sensor have a significant impact on the temperature dependence of the final measurement reading.

Baseline shifted with respect to reference point at 20°C.
